#### 14. CURRENT RESEARCH FOCUS

My research area is Atmospheric Physics. It focuses on understanding atmospheric dynamics, climate variability and impacts on the existence of human, ecosystem and our environment. Specific areas under my board field of interest are listed below:

- Understanding climate dynamics and variability from observations to projections - mean and extremes.
- Climate impacts assessment on health, energy, agriculture, water resources, disaster risks and gender.

- Climate services by transforming historical and projected climate data into useful information for planning and decision making in health, energy, agriculture, water resources, and disaster risks reduction.
- Space Science and Earth observation
- Atmospheric disturbances

### **On-going research projects**

#### **Coastal Community Resilience to Climate Change and Diarrhoea (C2R-C2D) (FY 2020-2025):**

The C2R-CD aims at generating knowledge in support of resilience building to climate change and improved diarrhoeal management in coastal communities. The project is funded by Danish Development Agency (DANIDA). Project partners include University of Ghana, University of Aarhus, Denmark), the Environmental Protection Agency (EPA) Ghana, People's Dialogue on Human Settlements (PD) Ghana. Building Stronger Universities Project III, University of Ghana, Ghana

**Building Stronger Universities Project III (BSUIII) (2019-2021) - Climate Change:** Under this project, the research focuses on the impact of climate change and extreme climate on crop farming: mitigation and adaptation strategies. It includes the suitability of crops yield under climate change and climate variability in Ghana.

### **Other Research**

Understanding the climate dynamics of Africa, climate observations and projections for climate services. Understanding the climate impact over Africa remains a challenge due to paucity of accessible and quality observational data and lack of research. This research provides a comprehensive assessment of the past, present and future climate of Africa. It also develops tools to improve our understanding of the driving mechanisms of the climate system and finally provides guiding principles for sectors relevant climate services for implementation and development planning.
