INTERGOVERNMENTAL PANEL ON climate change

# Land is a finite and precious resource

Productive land that provides us with food, fibre, materials and water and supports ecosystems and biodiversity is a finite and precious resource. Its increasingly impacted by climate change stress

Marc Foggin

Andrey Giljov and Karina Karenina

# How we use land for different uses matters for future response to climate change

# Climate change poses severe challenges for well-being of human societies and ecosystems

Increases in global mean surface temperature (GMST), relative to pre-industrial levels, affect processes involved in **desertification** (water scarcity), **land degradation** (soil erosion, vegetation loss, wildfire, permafrost thaw) and **food security** (crop yield and food supply instabilities). Changes in these processes drive risks to food systems, livelihoods, infrastructure, the value of land, and human and ecosystem health. Changes in one process (e.g. wildfire or water scarcity) may result in compound risks. Risks are location-specific and differ by region.

# How we use land is both a problem and solution for climate change

## F. Desertification and land degradation

Land-use change, land-use intensification and climate change have contributed to desertification and land degradation.

CHANGE in % rel. to 1961 and 1970

- 1 Population in areas experiencing desertification
- 2 Dryland areas in drought annually
- 3 Inland wetland extent

INTERGOVERNMENTAL PANEL ON climate change

### Response options based on land management

	Mitigation	Adaptation	Desertification	Land Degradation	Food Security	Cost
Agriculture	Increased food productivity	L	M	L	M	H
	Agro-forestry	M	M	M	M	L
	Improved cropland management	M	L	L	L	L
	Improved livestock management	M	L	L	L	L
	Agricultural diversification	L	L	L	M	L
	Improved grazing land management	M	L	L	L	L
	Integrated water management	L	L	L	L	L
	Reduced grassland conversion to cropland	L	---	L	L	M
Forests	Forest management	M	L	L	L	L
	Reduced deforestation and forest degradation	M	L	L	L	L
Soils	Increased soil organic carbon content	M	L	M	M	L
	Reduced soil erosion	→	L	L	M	M
	Reduced soil salinization	---	L	L	L	L
	Reduced soil compaction	---	L	---	L	L
Other ecosystems	Fire management	M	M	M	M	L
	Reduced landslides and natural hazards	L	L	L	L	L
	Reduced pollution including acidification	→	M	L	L	L
	Restoration & reduced conversion of coastal wetlands	M	L	M	M	L
	Restoration & reduced conversion of peatlands	M	---	na	M	M

### Response options based on value chain management

Demand	Reduced post-harvest losses	M	M	L	L	M
	Dietary change	M	---	L	M	M
	Reduced food waste (consumer or retailer)	M	---	L	M	M
Supply	Sustainable sourcing	---	L	---	L	L
	Improved food processing and retailing	L	L	---	---	L
	Improved energy use in food systems	L	L	---	---	L

### Response options based on risk management

Risk	Livelihood diversification	---	L	---	L	L
	Management of urban sprawl	---	L	L	M	L
	Risk sharing instruments	→	L	L	→	L

Options shown are those for which data are available to assess global potential for three or more land challenges. The magnitudes are assessed independently for each option and are not additive.

### Key for criteria used to define magnitude of impact of each integrated response option

	Mitigation Gt CO <sub>2</sub> -eq yr <sup>-1</sup>	Adaptation Million people	Desertification Million km <sup>2</sup>	Land Degradation Million km <sup>2</sup>	Food Security Million people	
Positive	Large	More than 3	Positive for more than 25	Positive for more than 3	Positive for more than 100	
	Moderate	0.3 to 3	1 to 25	0.5 to 3	1 to 100	
	Small	Less than 0.3	Less than 1	Less than 0.5	Less than 0.5	Less than 1
	Negligible	No effect	No effect	No effect	No effect	No effect
Negative	Small	Less than -0.3	Less than 1	Less than 0.5	Less than 0.5	Less than 1
	Moderate	-0.3 to -3	1 to 25	0.5 to 3	0.5 to 3	1 to 100
	Large	More than -3	Negative for more than 25	Negative for more than 3	Negative for more than 3	Negative for more than 100

→ Variable: Can be positive or negative    --- no data    na not applicable

### Confidence level

Indicates confidence in the estimate of magnitude category.

H High confidence  
M Medium confidence  
L Low confidence

### Cost range

See technical caption for cost ranges in US\$ tCO<sub>2</sub>e<sup>-1</sup> or US\$ ha<sup>-1</sup>.

●●● High cost  
●● Medium cost  
● Low cost  
--- no data

# Mix of policies to help us cope with land and climate challenges

Regulation (eg land use zoning, land sparing and land sharing approaches)

Land tenure

Voluntary (change in diet, standards and certification, collective action)

Persuasive (eg payments for ecosystem services)

Early warning systems and advisories

Risk sharing mechanisms (eg insurance)
