CLIMATE & RELATED CHANGES

ECOSYSTEM CHANGES

SOCIETAL CHANGES

LOW CARBON CLIMATE-RESILIENT DEVELOPMENT

CONCLUSION

NIGER

# WHAT DO WE KNOW?

- The world has warmed by about 1°C over the past 150 years
- Paris Agreement: "well below 2°C... pursue efforts...1.5°C"
- Current pledges: 3°C of by 2100, more after that
- Climate change is affecting lives, livelihoods and nature
- Every bit of warming matters
- Every year matters
- Every choice matters
- Climate action and sustainable development
- Clear benefits to keeping warming to 1.5°C or below
- Limiting warming to 1.5°C presents a global challenge

**CLIMATE & RELATED** CHANGES

**ECOSYSTEM CHANGES** 

SOCIETAL CHANGES

LOW CARBON CLIMATE-**RESILIENT DEVELOPMENT** 

CONCLUSION

**DEM. REPUBLIC OF CONGO** 

# WHAT DO WE KNOW ABOUT AFRICA?

- Parts of Africa have warmed by more than 1.5°C
- 3.8% share of global carbon dioxide emissions
- Increased exposure and vulnerability
- Other existing challenges
- Extra burden of climate change
- Fastest urbanizing continent
- Opportunity for climate-resilient, low-carbon development

INTRODUCTION

CLIMATE & RELATED CHANGES

ECOSYSTEM CHANGES

SOCIETAL CHANGES

LOW CARBON CLIMATE-RESILIENT DEVELOPMENT

CONCLUSION

Limiting warming to 1.5°C is not impossible but, in many parts of the world, it would require unprecedented transitions in all aspects of society - including energy, land, urban, infrastructure & industrial systems.

DJIBOUTI

JIM SKEA CO CHAIR IPCC WORKING GROUP III

LOW CARBON CLIMATE-RESILIENT DEVELOPMENT

CONCLUSION

# LIMITING GLOBAL WARMING TO 1.5°C

SOURCE: IPCC SR15, Figure SPM.3a

INTRODUCTION

**CLIMATE & RELATED** CHANGES

**ECOSYSTEM CHANGES** 

SOCIETAL CHANGES

LOW CARBON CLIMATE-**RESILIENT DEVELOPMENT** 

CONCLUSION

# LIMITING GLOBAL WARMING TO 1.5°C

- Global energy
  - Renewable energy: two thirds of global energy by 2050
  - Coal phased out
- Less energy overall, better efficiency • Industry, construction, transport
- Carbon dioxide removal
- No single recipe for success

# CLIMATE CHANGE AN AFRICAN PERSPECTIVE

CONCLUSION

### Ecosystem changes

### Societal changes

### Low-carbon and climateresilient development

- Mitigation
- Adaptation

# CURRENT EXPERIENCE OF CLIMATE CHANGE

- Rising temperatures, larger over land
- More frequent, intense climate extremes such as heatwaves, heavy rainfall and drought
- Novel climates in tropics
- Sea level rise of 16cm, extreme water levels during high tides and storms
- Increased rain and wind speed of cyclones
- General lack of reliable data

**CLIMATE & RELATED CHANGES** 

ECOSYSTEM CHANGES

SOCIETAL CHANGES

LOW CARBON CLIMATE-**RESILIENT DEVELOPMENT** 

BOTSWANA

CONCLUSION

# **PROJECTED CLIMATE CHANGES**

- Higher temperatures
  - Greater warming than global mean
  - Heat extremes: heat waves, hot nights
  - Rising frequency, intensity and duration

### Less rain

- Dry spells, consecutive dry days, droughts
- Extreme low river flows
- More rain
  - In Eastern Africa and central Sahel
  - Higher rainfall intensity and runoff

### Mean temperature change at 1.5°C warming

8

- 20 30 40

6

### Mean precipitation change at 1.5°C warming

SOCIETAL CHANGES

LOW CARBON CLIMATE-RESILIENT DEVELOPMENT

CONCLUSION

# CLIMATE CHANGE & THE NATURAL WORLD

# **CLIMATE ZONES ARE SHIFTING**

- Arid, dry areas are growing and shifting
- Novel and unprecedented hot climates in tropical regions
- Cooler zones are shrinking and shifting to higher altitudes and higher latitudes

NAMIBIA

# DESERTIFICATION

- Drought (frequent, prolonged, intense)
  - Caused and/or exacerbated by climate change
  - Droughts are hotter and thus more severe
- Human activities (exacerbated by drought)
  - Wood harvesting
  - Overgrazing, trampling, soil compaction
- Erosion from wind and water
  - Loss of soil fertility, lower water retention
- Data gaps
  - Extent of degraded land, vegetation maps

LOW CARBON CLIMATE-RESILIENT DEVELOPMENT

CONCLUSION

- Climate change
- Human factors (exacerbated by climate change)
  - Land use change, habitat pollution, over-exploitation
- Natural factors (exacerbated by human factors)
  - Invasive alien plants, pests, diseases, bush encroachment

INTRODUCTION

**CLIMATE & RELATED** CHANGES

**ECOSYSTEM CHANGES** 

SOCIETAL CHANGES

LOW CARBON CLIMATE-**RESILIENT DEVELOPMENT** 

CONCLUSION

- >2000 plant species in dryland areas could become extinct within 100 years.
- The Fynbos biome in South Africa could lose about 45% of its suitable growing area at 2°C warming.
- Limiting warming can help protect this rich habitat.

INTRODUCTION

**CLIMATE & RELATED** CHANGES

**ECOSYSTEM CHANGES** 

SOCIETAL CHANGES

LOW CARBON CLIMATE-**RESILIENT DEVELOPMENT** 

CONCLUSION

### Already

- Water resources declining
- Suitability for crops decreasing
- Oases abandoned
- Future
  - Water demand exceeds supply
  - Too hot and dry for traditional crops

INTRODUCTION

**CLIMATE & RELATED** CHANGES

**ECOSYSTEM CHANGES** 

SOCIETAL CHANGES

LOW CARBON CLIMATE-**RESILIENT DEVELOPMENT** 

CONCLUSION

- Large populations live in highland areas
- Climate change impacts in natural and human systems
  - Knock-on effects on lowlands and oceans
- East African glaciers could lose >80% mass by 2100
- Deep concern experienced at local level

INTRODUCTION

CLIMATE & RELATED CHANGES

**ECOSYSTEM CHANGES** 

SOCIETAL CHANGES

LOW CARBON CLIMATE-RESILIENT DEVELOPMENT

CONCLUSION

- Oceans absorb 90% of heat ocean heatwaves
- Oceans absorb 20-30% of carbon dioxide acidification, chemistry
- Water nutrients and dissolved oxygen
- Dead zones
- Distribution and abundance of marine life
- 70-90% of tropical coral reefs disappear at 1.5°C warming

# CLIMATE CHANGE AN AFRICAN PERSPECTIVE

### Ecosystem changes

### Societal impacts

### Low-carbon and climateresilient development

- Mitigation
- Adaptation

# SOCIAL VULNERABILITIES

- Poverty, malnutrition, disease
- In sub-Saharan Africa 41% live in extreme poverty Multidimensional poverty: combination of deprivations • Vulnerable areas: drylands, coastlands, cities, informal
- settlements
- 85-95% of people who are vulnerable and exposed to climate risks live in Africa and Asia
- Food insecurity, food prices, income losses, livelihoods, health, displacement
- Vulnerable groups: subsistence farmers, indigenous people, local fishing communities, women, children and the elderly
- Women: significant labour force, limited by gender inequalities

INTRODUCTION

**CLIMATE & RELATED** CHANGES

**ECOSYSTEM CHANGES** 

**SOCIETAL CHANGES** 

LOW CARBON CLIMATE-**RESILIENT DEVELOPMENT** 

CONCLUSION

# C The biggest climate change impacts can be seen in the food,

CAMEROON

agricultural and health sectors, with knock-on effects on poverty, the economy, migration and conflict.

# FOOD & AGRICULTURE IMPACTS ACROSS AFRICA

Some oases in northern Africa have been abandoned

In pastoral lands across

rates and productivity

Africa lower animal growth

31

INTRODUCTION

CLIMATE & RELATED CHANGES

ECOSYSTEM CHANGES

**SOCIETAL CHANGES** 

LOW CARBON CLIMATE-RESILIENT DEVELOPMENT

CONCLUSION

Poverty rate **in Ghana** increased by 5.4% in 2015 from loss of productivity

> In Nigeria, there have been reports of climate change affecting the livelihoods of arable crop farmers.

**Farmers in Ethiopia** lose about 220 US \$ per hectare through soil erosion

> Reduced productivity led to higher prices, negatively affecting food security, especially in **sub-Saharan Africa**

One third of people undernourished in **sub-Saharan and East Africa** 

### Ethiopia and southern

**Africa**, 2015/16, worst drought in 50 years, 28 million people needed food aid

**Malagasy farmers** vulnerable to shocks from extremes

INTRODUCTION

CLIMATE & RELATED CHANGES

ECOSYSTEM CHANGES

**SOCIETAL CHANGES** 

LOW CARBON CLIMATE-RESILIENT DEVELOPMENT

CONCLUSION

Food security will be increasingly affected by future climate change through yield declines – especially in the tropics – increased prices, reduced nutrient quality, and supply chain disruptions.

BENIN

YOUBA SOKONA VICE CHAIR, IPCC

**CLIMATE & RELATED** CHANGES

**ECOSYSTEM CHANGES** 

**SOCIETAL CHANGES** 

LOW CARBON CLIMATE-**RESILIENT DEVELOPMENT** 

CONCLUSION

- 11% of global population has decreased food security
- 20% of these live in Africa
- Heat and dryness impact on agriculture
- Made worse by other human activities

• 31% of undernourished populations live in Africa (about 254 million)

**SOCIETAL CHANGES** 

LOW CARBON CLIMATE-**RESILIENT DEVELOPMENT** 

CONCLUSION

TANZANIA

# FOOD SECURITY

- Crop yields
- Area suitable for crops
- Agricultural productivity
  - 17–22% loss, by 2050 at 1.5°C
- Lower nutritional quality due to rise in CO<sub>2</sub>

• Staples: 15% reduction in 11 major global crops, by 2050 at 1.5°C • Vegetables, cash crops like cocoa, coffee, cotton, peanuts

23% more cropland needed to compensate (>3m km<sup>2</sup> globally)

CLIMATE & RELATED

ECOSYSTEM CHANGES

**SOCIETAL CHANGES** 

W CARBON CLIMATE-IENT DEVELOPMENT

MADAGASCAR

USION

# FOOD SECURITY

- Loss of agricultural productivity & income
- pests and diseases
- Food price spikes, famines
- Loss / deterioration of agricultural land
  - Large-scale corporate land acquisition
  - Commercial agriculture expanding into rangelands
  - Fragmentation of habitats
  - Loss of vegetation, desertification, soil erosion, sea level rise
  - Bush encroachment, spread of alien invasive plants
- Increased vulnerability to extreme events
  - Geographical isolation, lack of access, lack of social safety nets

# • Loss in livestock productivity and growth rates, spread of

INTRODUCTION

**CLIMATE & RELATED** CHANGES

**ECOSYSTEM CHANGES** 

SOCIETAL CHANGES

LOW CARBON CLIMATE-**RESILIENT DEVELOPMENT** 

CONCLUSION

- 90% of the world's rural poor live in coastal areas of 15 countries, including Africa
- $\frac{1}{4}$  to  $\frac{1}{3}$  of dietary protein and micronutrients from seafood
- Decline in fishing revenues in 89% of countries, by 2050
- >25% decrease in maximum fish catch potential

INTRODUCTION

CLIMATE & RELATED CHANGES

ECOSYSTEM CHANGES

**SOCIETAL CHANGES** 

LOW CARBON CLIMATE-RESILIENT DEVELOPMENT

CONCLUSION

- Undernutrition and malnutrition
  - Stunting, wasting
- Disease
  - Vector-borne, water / food-borne
- Deadly heat stress
- Air quality
  - Dust, related meningitis, fire smoke
  - Data gap

# Excess deaths per year from climate change by 2030 compared to 1961-1990

	Africa & Middle East	World
Childhood undernutrition	68 200	95 200
Malaria	57 500	60 100
Diarrhoea	31 900	48 100
Heat stress	4 900	37 600

### SOCIETAL CHANGES

LOW CARBON CLIMATE-**RESILIENT DEVELOPMENT** 

CONCLUSION

NAMIBIA

# POVERTY

- Climate change is a poverty multiplier
  - Making poor people poorer
- Increasing number of people living in poverty • 3 to 16 million people forced into poverty by 2030
  - Agriculture, food prices
- Food security, water-security, energy, well-being less challenging at 1.5°C than at 2°C or higher
- Exposure to climate risks 20x lower in:
  - sustainable socio-economic development (50 million exposed) versus
  - high poverty and inequality (1 billion exposed)

ITERGOVERNMENTAL PANEL ON Climate change

### INTRODUCTION

CLIMATE & RELATED

**SOCIETAL CHANGES** 

LOW CARBON CLIMATE-**RESILIENT DEVELOPMENT** 

CONCLUSION

**DEM. REPUBLIC OF CONGO** 

# **CONFLICT AND MIGRATION**

# Conflict

- Land degradation productivity violent conflict
- Increased dryness food riots
- Existing conflict reinforced / sustained

# Migration

- Droughts, food / water shortage, flooding, sea level rise • Seasonal / permanent migration
- Rural urban movement
- 10% less rain  $\rightarrow$  4.5% increase in urbanization (SSA, 1950-2000) • East Africa coastal outmigration: projected 750 000 between 2020-
- 2050

**BURKINA FASO** 

# ECONOMY

- Railways at risk of sand movements
- Infrastructure at risk from storms, floods, sea level rise Reductions in economic growth • Widening income inequality
- Highest tourism sector risks for least developed countries Tourism >15% of national economy Africa's tourism assets increasingly at risk
- - Tourist facilities, natural assets

climate

CLIMATE & RELATED CHANGES

**ECOSYSTEM CHANGES** 

**SOCIETAL CHANGES** 

LOW CARBON CLIMATE-**RESILIENT DEVELOPMENT** 

CONCLUSION

MOZAMBIQUE

# CASCADING AND COMPOUND EFFECTS

- Cascading effects:
  - food riots economic collapse

  - Ocean changes coral reef damage fisheries food economics
- Compounding effects:
  - wildfire & conflict & poverty & economic crisis

• **Desertification** – migration to marginal land – environmental degradation – livestock & crop losses – hunger – out-migration –

• **Flooding** – harvest failure – loss of employment – drop in wages – failure in trade and informal safety nets – livestock sales – drop in food prices – grain production stops – no food imports – livestock disease – food shortage – escalating food prices

Heat & drought & flooding & food security & health crisis &

INTRODUCTION

**CLIMATE & RELATED** CHANGES

**ECOSYSTEM CHANGES** 

**SOCIETAL CHANGES** 

LOW CARBON CLIMATE-**RESILIENT DEVELOPMENT** 

CONCLUSION

# **URBAN IMPACTS**

- Cities concentrate climate related risks
  - Deadly heat stress, flooding, water poverty, landslides, fire, diseases
  - Affecting people, services, infrastructure
  - Adding to existing problems around poverty, exclusion, governance
  - Sea level rise in coastal cities threatens critical infrastructure
  - Informal settlements at particular risk
- Cities also concentrate opportunities for change

# CLIMATE CHANGE AN AFRICAN PERSPECTIVE

CONCLUSION

# **TRANSFORMATION FOR AFRICA**

- Climate-resilient, low carbon development
- Adapt to unavoidable climate change impacts
- Reduce poverty, hunger, malnutrition
- Improve health and livelihoods
- Affordable, clean energy
- Clean water
- Finance

INTRODUCTION

CLIMATE & RELATED CHANGES

ECOSYSTEM CHANGES

SOCIETAL CHANGES

LOW CARBON CLIMATE-RESILIENT DEVELOPMENT

CONCLUSION

### Energy poverty

- Wood and charcoal: forest degradation, deforestation
- Health problems associated with indoor smoke, fire hazard
- High electricity prices unaffordable for poor households
- Affordable clean energy (solar, wind, hydro) energy security
- Policies to incentivize and regulate supply; investment
  - Reduced health risks, hard labour, safety, school enrolment, agency, income opportunities

ation, deforestation door smoke, fire hazard for poor households wind, hydro) – energy security ate supply; investment safety, school enrolment, agency,

**CLIMATE & RELATED** CHANGES

**ECOSYSTEM CHANGES** 

SOCIETAL CHANGES

LOW CARBON CLIMATE-**RESILIENT DEVELOPMENT** 

**CONCLUSION** 

- Renewable energy: cost and feasibility
  - Political, economic, social, technical
- Solar power: major opportunities and co-benefits at all scales
  - Cities, farming communities, large scale power plants
- Hydropower: potential for growth, risks for water security
- Bioenergy: potential for renewable energy, potential trade-offs
  - Sustainable options: waste steams, land restoration, low-input

### MOROCCO

INTRODUCTION

**CLIMATE & RELATED** CHANGES

**ECOSYSTEM CHANGES** 

SOCIETAL CHANGES

LOW CARBON CLIMATE-**RESILIENT DEVELOPMENT** 

CONCLUSION

- Sustainable agriculture
  - Improve food and water security
  - Protect against disease
  - Provide energy, fibre and building materials
  - Provide income from cash crops
  - Protect and preserve biodiversity and ecosystems
  - Contribute to climate change mitigation

LOW CARBON CLIMATE-RESILIENT DEVELOPMEN

CONCI USION

SOUTH AFRICA

# CLIMATE RESILIENT AGRICULTURE

- Intensification

  - Fertilizer application, precision agriculture, seed priming • Land surplus, restoration / reforestation Commercialization, diversification
- Conservation agriculture
  - no/minimum tillage, mulching, cover crops, crop rotation
  - mixed cropping, crop-livestock mixes
  - integrating trees into croplands and rangelands (agroforestry)
  - flood-proofing crops, rainwater harvesting
- Improved logging practices, better reporting
  - protecting existing forests and peatlands
- Removal of invasive alien plants
- Land restoration
  - Monetary returns can be 3 to 6-fold over a 30 year period

# LIVESTOCK AND FISHERIES

- Importance of livestock in Africa
  - Food security, especially with increasing crop failures
- Options for adaptation in livestock
  - Rainwater capturing, seasonally alternating use of rangelands, rotational grazing, careful livestock breeding and selection, management of woody plants (e.g. bush encroachment), livestock feed that is unsuitable for human consumption, shifting from cattle to camels
- Indigenous and local knowledge
- Options for adaptation in fisheries
  - Financial aid, accessing new fishing grounds, fair or preferential distribution of harvest, improved fishing gear, insurance

SOCIETAL CHANGES

LOW CARBON CLIMATE-**RESILIENT DEVELOPMENT** 

CONCLUSION

- Energy (metals, chemicals, minerals); cement, foam, refrigeration
  - Electrify, energy efficiency, renewable energy
  - Low carbon processes and materials, substitution, carbon storage
  - Circular economy principles: avoid waste, keep products in use, recycle
- Food industry
  - cold storage

• Harvest / post-harvest technology, processing, transport, storage, including

CLIMATE & RELATED CHANGES

ECOSYSTEM CHANGES

SOCIETAL CHANGES

LOW CARBON CLIMATE-RESILIENT DEVELOPMENT

CONCLUSION

- Decentralized governance can empower people
- Informal governance / customary systems can improve land security and management of communal resources
- Policy effectiveness can bring significant benefits

**CLIMATE & RELATED** CHANGES

**ECOSYSTEM CHANGES** 

SOCIETAL CHANGES

LOW CARBON CLIMATE-**RESILIENT DEVELOPMENT** 

**CONCLUSION** 

- Early warning systems can lead to better preparedness
- International collaboration can play a critical part in tackling and adapting to climate change
- Technology development and transfer is an enabler of both mitigation and adaptation

Investing in capacity building and education can improve adaptation

**CLIMATE & RELATED CHANGES** 

**ECOSYSTEM CHANGES** 

SOCIETAL CHANGES

LOW CARBON CLIMATE-**RESILIENT DEVELOPMENT** 

**CONCLUSION** 

- Investment in adaptation finance is needed
  - 18-25% of climate finance flowed into adaptation in developing countries
  - USD 140-300 billion per year needed in developing countries

  - In 2014 USD 22.5 billion adaptation funding was available • US\$ 1 spent - US\$ 2.30-3.30 net benefits
- Climate insurance

  - Social protection against existing and novel climate related risks Enables proactive adaptation, protects livelihoods, improves food security
